TECHNICAL SKILLS

Languages: ARM Assembly, x86 Assembly, C, Java, Python, SQL, Haskell, Lean, Hardware Definition Language, JavaScript, HTML/CSS, Markdown

Frameworks: JUnit, Astro, GitHub Pages

Developer Tools: Git, Gradle, Visual Studio Code, DotPeek, IntelliJ, Eclipse, GitLab Runner, Google Colab, Android Studio

Cyber Tools: IDA, Wireshark, Sysinternals Suite

PERSONAL STATEMENT

- As a second year mentor, I helped first years to understand the content of their computer science degree, and answered questions about life at university both over discord and at in person events
- As a third year senior mentor, I ran the first year discord server and maintained the discord bot that handled verification of student status and admission to the server
- As the trips and hackathons secretary for HackSoc, I organised two trips within Nottinghamshire, ensured that society members knew which hackathons were taking place around the country, organised HackNotts (our annual hackathon), and maintained relationships with other hackathon organisers around the country
- As a pianist, I am incredibly creative and I enjoy both playing well known pieces and composing my own. To date, I have released four of my own compositions
- My course only has three cybersecurity related modules (Computer Security, Cryptography, and Malware Analysis); I took all three and really enjoyed doing them!

EXPERIENCE

Senior IT Service Desk Smart Bar Assistant

University of Nottingham

Sept. 2025 – June 2026

Nottingham, United Kingdom

- In addition to my Smart Bar Assistant responsibilities, I
 - * Ensured our service standards were met
 - * Executed multi-factor authentication resets
 - * Was a first point of contact for all smart bar assistants

IT Service Desk Smart Bar Assistant

University of Nottingham

Sept. 2024 – June 2025, Sept. 2025 – June 2026

Nottingham, United Kingdom

- Troubleshoot various issues including network issues, account activation and registration issues, lost/broken MFA devices, etc.
- Liaised with staff in the student service centres to provide a seamless customer experience
- Escalated issues that required higher privileges, i.e. those that required a password reset for resolution, to the second line service desk

Software Engineering Intern

Roku

July 2025 – Sept. 2025

Cambridge, United Kingdom

- Designed, researched, and delivered an AI ordering algorithm using classical ML techniques and a web frontend for visualising the results of the algorithm in 10 weeks
- Presented my research to stakeholders, and provided critical analysis of the differences between the current solution and my suggestion
- Worked directly with a senior manager in the OS UI/SDK and Mobile Engineering team to ensure that my work was aligned with business goals

IT Support Technician

AST Language Services Ltd

Feb. 2023 – Aug. 2024

Nottingham, United Kingdom

- Wrote an intranet system from scratch using HTML, CSS, and JavaScript
- Wrote a python script that utilised an open source LLM to estimate the quality of translations
- Set up an add-on for a CRM and instructed team members in its use
- Troubleshoot colleagues' computer problems, including email access issues and microsoft office issues
- Used JetBrains DotPeek to recover lost source code from binaries
- Troubleshoot and optimised company websites using online SEO tools
- Was presented with an employee recognition award for my work

EDUCATION

University of Nottingham

Nottingham, United Kingdom

Bachelor of Science in Computer Science

Sept. 2023 – June 2026

Computer Fundamentals

92%

Software Engineering Group Project

82%

Programming and Algorithms

79%

Systems and Architecture

79%

etc

The West Bridgford School

Nottingham, United Kingdom

A-Levels

Sept. 2020 – June 2022

Computer Science

A

Maths

A

Physics

B

PROJECTS

Group Project - Predicting Disease Outbreaks | Git Lead | Webdev, Git, GitLab, Python, Flask Oct. 2024 - May 2025

- Communicated effectively with a team of 8 students to deliver on time, while ensuring high Git literacy and code standards
- Developed a flask webserver capable of hosting an interactive map with a shaded overlay for clearly highlighting the states in outbreak
- Worked on an AI prediction algorithm to predict numbers of Dengue cases in Brazil, and a classification algorithm which would determine whether that number of cases constituted an outbreak according the World Health Organisation
- Calmly resolved multiple complex merge conflicts under time pressure
- Configured a CI/CD server using a Raspberry Pi and GitLab Runner for the git repository
- Configured GitLab notification integrations for Microsoft Teams and Discord

Portfolio Website | Git, Astro, GitHub Pages

May 2024 - Present

- Maintaining an up-to-date website to provide easy access to my open source projects
- This allowed me to learn about static site generators, and use GitHub Pages to host a website
- [Visit the website](#)

Gregor | Git, Raspberry Pi, Python, Linux

March 2025

- In a team of three, modified a rubber duck to respond to hand gestures and identify plants
- I ensured that the computer vision module was able to get a photo from the camera on the Pi
- [Devpost](#)

FurTones | Python, HTML, CSS, JavaScript, Git, Raspberry Pi, Linux

February 2025

- In a team of three, modified a cat keyboard to play itself for AstonHack 10, a 24-hour hackathon
- Wrote a flask webserver which was able to trigger servo motors based on notes selected on a stave UI
- Ran into issues which meant that the Pi needed to be rebooted so we could reset the IO pins after every run. My solution was to close the IO pins after each use, which involved rerunning the motor control program after each tune was played
